Lending that sees who you really are.

Wikshi

Protocol

Credit-Native Lending on Creditcoin

Creditcoin USC v2

Wikshi

THE PROBLEM

Amara repairs phones in Nairobi. She's repaid **14 loans** through Aella without a single late payment. Her business grew **40%** last year. She needs **$500** to buy parts before the holiday rush.

She has **$2,000** in stablecoin savings. A perfect track record. **Five years** of history.

But when she opens any DeFi lending app, none of this exists. She's a blank wallet. To borrow **$500**, she must lock up **$750**. Money she needs for inventory.

DeFi is credit-blind. Every borrower is a stranger.

Wikshi

THE SOLUTION

Before

Anonymous wallet
No identity, no history

No history visible
Every borrower starts at zero

150% collateral required
Lock $750 to borrow $500

One-size-fits-all rate
Same APR for everyone

Sorry, you're a stranger
Trust cannot be earned

After

Credit Passport
14 loans verified, 5 years of history

Score: 720
Tier: Established

115% collateral
35% less capital locked

15% rate discount
Personalized pricing

Real-world loans accepted
Receivables become on-chain collateral

We read real payment history — from Creditcoin's **11.86 million** loan transactions and any EVM chain — and turn it into personalized borrowing power. **Real-world loan receivables** become on-chain collateral.

WHY NOW

Three things just changed.

1. **The data exists.**
   Creditcoin has recorded **11.86M** loan transactions and **$100M+** in real-world lending volume. Until recently, no smart contract could read it.

2. **The infrastructure shipped.**
   USC v2 launched January 2026 — cross-chain payment proofs verified in under **15 seconds**. For the first time, a lending protocol can see what borrowers did on other chains.

3. **Nobody has built it.**
   Zero lending protocols exist on Creditcoin. The chain was designed for credit. The house has no furniture.

Wikshi

THE OPPORTUNITY

First mover on the only chain built for credit.

Creditcoin Ecosystem
1.22M addresses · Zero lending · Greenfield

Cross-Chain Credit
USC connects to $30B+ Ethereum DeFi

Global Credit Gap
$5.3T unsecured credit · $20B+ on-chain

#9

in global RWA development activity

Santiment, February 2026

Alongside Hedera, Chainlink, and Avalanche

Wikshi

THE PRODUCT

What Amara sees.

Credit Passport

AK **Amara K.**
Nairobi, Kenya

Loans Repaid	14
History	5 years
Credit Score	720

Tier: Established

1. Connect wallet.
Credit Passport appears.

Loan Terms

Collateral Ratio	Interest Rate
115% ~~150%~~	6.8% ~~8.0%~~

You Save

$175 less collateral

15% rate discount

2. Personalized terms calculated.

Real-World Assets

Microfinance Loan
↓
Receivable NFT
↓
Fungible wREC Token
↓
Lending Collateral

Worked example:
$10K receivable → **$8,392** collateral value

3. Real-world loans become
DeFi collateral.

Deployed and source-verified on Creditcoin USC Testnet v2.
12 contracts. 325 tests passing.

POSITIONING

The only lending protocol that reads real credit history.

	SEES CREDIT HISTORY?	WORKS CROSS-CHAIN?	REAL-WORLD COLLATERAL?	LIVE ON CREDITCOIN?
Aave V3	✗	✓	✗	✗
Compound	✗	✗	✗	✗
3Jane	✓ (Ethereum only)	✗	✗	✗
Goldfinch	◐ (human auditors)	✗ (manual pools)	◑	✗
THE WIKSHI ROW **Wikshi**	✓ (on-chain + cross-chain)	✓ (via USC)	✓ (DCF-priced receivables)	✓ (first ever)

Every other protocol is credit-blind, single-chain, or ignores real-world assets. Wikshi does **all three**.

Wikshi

ROADMAP

From hackathon to infrastructure.

Now

- Testnet MVP live
- 12 contracts verified
- Credit scoring working
- 325 tests passing

Next

- → Mainnet deployment
- → Real stablecoin markets
- → Aella receivable integration
- → First real borrowers

Future

- Multi-chain credit aggregation
- Privacy-preserving credit proofs
- Institutional receivable markets
- ***The credit layer of DeFi***

TEAM & ECOSYSTEM

The Team

Akash Mondal

Protocol Architecture

Full-stack engineer. Built production DeFi systems. Creditcoin-native from day one.

Hitakshi Arora

Strategy & Operations

Market Research And Deep Defi Knowledge

Miny Labs

Why This Ecosystem

> *DeFi doesn't need more collateral.*
> *It needs trust you can build on.*
>
> — Creditcoin Blog

- Built specifically for **Creditcoin's** credit infrastructure
- Reads native loan events + USC cross-chain proofs
- Compatible with Aella/Credal ecosystem
- CEIP-ready: cross-chain, emerging markets, sustainable

Creditcoin recorded **11.86 million** loan transactions.

Nobody built the protocol to use them.

We did.
